// The following code solves SPOJ problem 4110: Fast Maximum Flow (FASTFLOW)

/* Input
 The first line contains the two integers N and M. The next M lines
 each contain
 three integers A, B, and C, denoting that there is an edge of
 capacity C (1 <= C <= 109) between nodes A and B (1 <= A, B
 <= N). Note that it is possible for there to be duplicate
 edges, as well as an edge from a node to itself.

Output
 Print a single integer (which may not fit into a 32-bit integer)
 denoting the
 maximum flow / minimum cut between 1 and N.

Example

Input:

```

4 6
1 2 3
2 3 4
3 1 2
2 2 5
3 4 3
4 3 3
Output:
5

```

```

*/
int main() {
    int n, m;
    scanf("%d%d", &n, &m);

    PushRelabel pr(n);
    for (int i = 0; i < m; i++) {
        int a, b, c;
        scanf("%d%d%d", &a, &b, &c);

        pr.AddEdge(a-1, b-1, c);
        pr.AddEdge(b-1, a-1, c);
    }
    printf("%d\n", pr.GetMaxFlow(0, n-1));
    return 0;
}

```

5.5 Unweighted Bipartite Matching

// Max matching for unweighted bipartite graph
 // Kuhn's algorithm $O(n^2)$

/*
 Given a **bipartite graph** $G = (X \cup Y, E)$. The vertices of
 X are denoted x_1, x_2, \dots, x_m , and the vertices of
 Y are denoted y_1, y_2, \dots, y_n .

A **matching** on G is a set of edges $E' \subseteq E$ such that
 no two edges in E' share a common vertex.

Requirement: Find a **maximum matching** (having the most edges
) on G .

Input
 * **Line 1:** Contains two integers, m and n ($1 \leq m, n \leq 100$).

* **Subsequent lines:** Each line contains two positive integers,
 i and j , representing an edge $(x_i, y_j) \in E$.

Output
 * **Line 1:** The number of edges in the maximum matching found (K).
 * **Subsequent lines:** Each line contains two numbers, u and
 v , representing the edge (x_u, y_v) chosen for the
 maximum matching.

```

#include <bits/stdc++.h>
using namespace std;

```

```
const int N = 102;
```

```
int n, m, Assigned[N];
```

```
int Visited[N], t = 0;
```

```
vector<int> a[N];
```

```

5.7 Graph cut inference

```
// Special-purpose {0,1} combinatorial optimization solver for
// problems of the following by a reduction to graph cuts:
//
// minimize          sum_i psi_i(x[i])
// x[1]...x[n] in {0,1} + sum_{i < j} phi_{ij}(x[i], x[j])
//
// where
// psi_i : {0, 1} --> R
// phi_{ij} : {0, 1} x {0, 1} --> R
//
// such that
// phi_{ij}(0,0) + phi_{ij}(1,1) <= phi_{ij}(0,1) + phi_{ij}(1,0)
// (*)
//
// This can also be used to solve maximization problems where the
// direction of the inequality in (*) is reversed.
//
// INPUT: phi -- a matrix such that phi[i][j][u][v] = phi_{ij}(u, v)
//          psi -- a matrix such that psi[i][u] = psi_i(u)
//          x -- a vector where the optimal solution will be stored
//
// OUTPUT: value of the optimal solution
//
// To use this code, create a GraphCutInference object, and call
// the
// DoInference() method. To perform maximization instead of
// minimization,
// ensure that #define MAXIMIZATION is enabled.
